Duration of rabbit deaths		. Club notified:			
Name	Breed	Ring/tattoo number	Vaccinated yes/no	Vaccine batch & date	

The above information is being collated in support of a vaccination for all strains of RHDV and myxomatosis. I understand my personal details will not be passed on. The system is aimed at recoding disease related deaths by putting pages to the religious and where a vaccine may have prevented the disease. This information						
deaths by putting names to the rabbits lost where a vaccine may have prevented the disease. This information will be shared via numbers lost, breeds, and vaccination information only.						
I acknowledge the below quarantine time frames, per BRC rules that are or were imposed and are or were upheld.						
In the case of RHDV, I agree that my property has remained under strict quarantine for a period not less than 120 days from the last rabbit death, per British Rabbit Council regulations. There have been no rabbit movements in or out of the property during this time.						
In the case of Myxomatosis, I agree that my property has remained under strict quarantine for a period not less than 28 days from the last rabbit death. There have been no rabbit movements in or out of the property during this time.
